### Discovery-Corp Unveils 3-D Model of Galaxy Deposit

**Vancouver** - Discovery-Corp Enterprises Inc. (the "Company") has unveiled a 3-D model of its copper-gold deposit on its wholly-owned Galaxy Property, located in the Afton Camp in Kamloops, BC. The 3-D model shows there is potential for additional mineralization on-strike to the southeast and northwest. There is also potential to discover the offset root of the Galaxy deposit, in the footwall of the thrust fault that truncates the mineralization at depth. The 3-D Model is available for viewing at [www.Discovery-Corp.com](http://www.Discovery-Corp.com)

Discovery-Corp has obtained the digital data base for previous drilling as well as some original drill logs. Historical resource estimates range from 1.7 to 3.2 million tonnes. The most recent is a 1996 estimate of 1.7 million tonnes grading 0.39% copper and 0.13 grams of gold per tonne with a higher-grade resource of 862,000 tonnes grading 0.65% copper and 0.22 grams of gold per tonne. Historic resource estimates of the Galaxy property are not NI 43-101 compliant. Gold values of 3.52 grams of gold per tonne and 7.57% copper over 6.09 meters were reported in 1990 reverse circulation drilling.

Discovery-Corp drilled three diamond drill holes in the Galaxy zone in 2006, which returned the following NI 43-101 compliant results: (previously released in a news release dated October 16, 2006)

Drill Hole	From (metres)	To (metres)	Interval (metres)	Cu (%)	Au (g/t)
GX06-1	23.47	35.94	12.47	0.72	0.46
Incl.	24.08	26.12	2.04	2.77	1.47
GX06-2	35.35	41.43	6.08	0.83	0.23
GX06-3	78.02	84.10	6.08	0.49	0.17

CME Consultants Inc. of Richmond, BC prepared the data compilation and modelling of the Galaxy deposit which has a strike length of 600 metres and a maximum depth of 140 metres. Using the data compilation and modelling of the Galaxy deposit Discovery-Corp intends to undertake a drill program on the Galaxy in 2011 in accordance with CME Consultants' recommendations.

CME recommends a 2,000 metre diamond drill program to test the strike and depth potential in addition to verifying and infilling historical zones. This will increase the size of the current deposit and will assist in moving the deposit toward a NI 43-101 compliant resource. The estimated cost of the program is \$400,000 and to accomplish this Discovery-Corp plans to arrange a financing to fund the exploration program and for working capital. Discovery-Corp is planning to commence further exploration of its wholly-owned Galaxy Property this summer.

**About Discovery-Corp**

Discovery-Corp is a junior exploration company based in British Columbia, Canada that is focused on finding high quality gold and copper properties. Discovery-Corp's properties include the Galaxy, located in the Afton camp in Kamloops, BC and the Rock Creek Ranch, located in North Central Nevada at the intersection of the Getchell and Battle Mountain-Eureka gold trends.
